

# STRAUB-METAL-GRIP GT

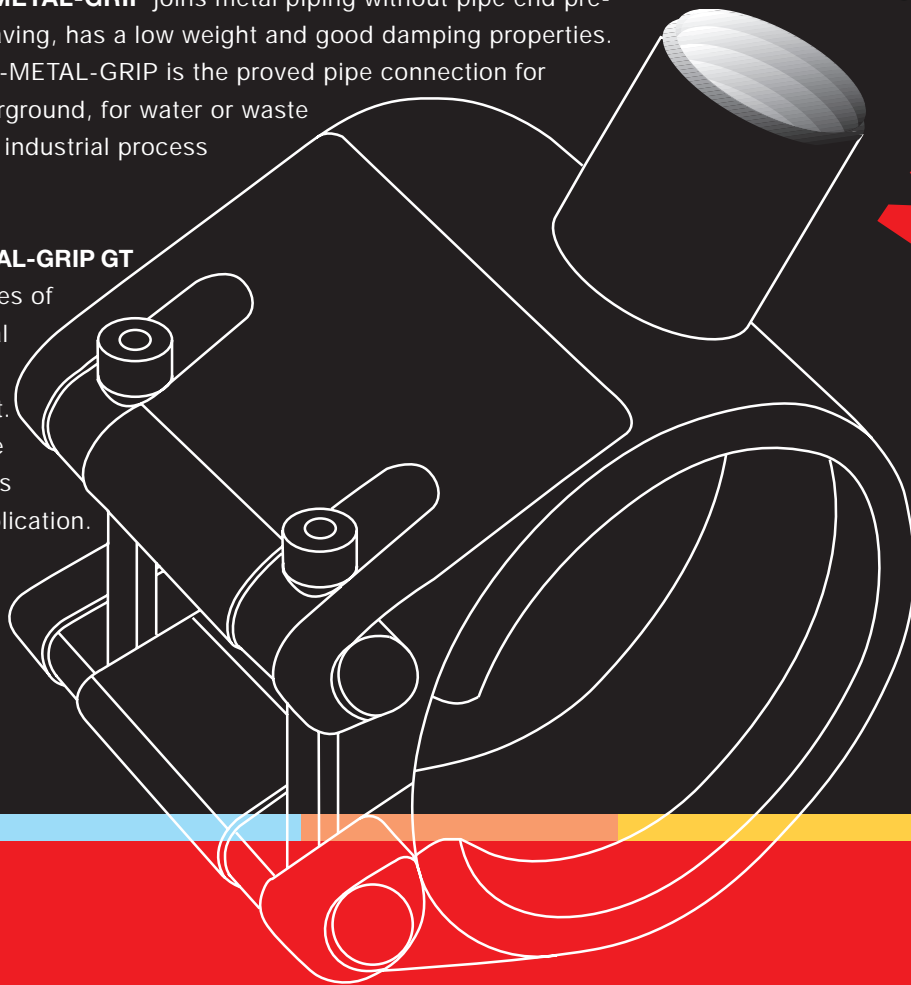

## More than the Original

With the new outlet coupling **METAL-GRIP GT** STRAUB presents a further innovation in coupling technology: a pull-out resistant **pipe connection**, **compansion joint** and **side outlet** in one.

The proven **STRAUB-METAL-GRIP** joins metal piping without pipe end preparation. It is space-saving, has a low weight and good damping properties. Therefore the STRAUB-METAL-GRIP is the proved pipe connection for construction and underground, for water or waste water installations and industrial process piping.

The new **STRAUB-METAL-GRIP GT** combines all advantages of the well-known Original with the added feature of an integral side outlet. This means: even more advantages and various additional fields of application.

**NEW**

# The connecting one

## the clever principle

**STRAUB-METAL-GRIP GT** outlet couplings are designed to serve as a joining device providing an integral outlet like:

- taking of samples, drainage, ventilation
- as a measuring point for pressure, temperature, flow through or other controls
- as a prepared possibility for additional outlets for new users or consumers, for installation expansions ect.

### The advantages:

- Cost-saving: one **STRAUB-METAL-GRIP GT** replaces a tee with two additional couplings.
- Time-saving: additional outlets can be realized fastly, with very short interruption times.
- Simply: usable without particular sanitary tools and no pipe end preparation.
- As all STRAUB couplings, the METAL-GRIP GT is detachable and re-usable.

Available in sizes (AD): **60.3 / 76.1 / 88.9 / 114.3 / 139.7 mm.**  
pressure rate up to **PN 16** (232 psi), temperature range from **-20° to +70°C.**

### Connecting possibilities:

With threaded fittings (1), STRAUB-Couplings (2) or other pipe joining methods like pressfittings etc.
